

❖ Object Oriented

➤ No's in language

- No structs
- No multi/Inheritance
- No Generics?
- No reflection
- Limited type inference
- Library System?
- No overload

➤ KeyWords

- Fully Capital
- MAIN
- IF
- IFELSE
- ELSE
- FOR
- RETURN
- CLASS
- VAR?
- BREAK
- CONTINUE
- GOTO
- WHILE
- THEN
- INPUT
- OUTPUT
- FNC

➤ TOKENS

- Keyword
- NonAssignmentOperator
- Value
- Error
- Function
- Object
- Identifier
- LineEndToken
- OpenParen
- CloseParen
- AssignmentOperator
- OpenCurly
- CloseCurly

➤ Variables

- Types are Capital
- Int, String ... ect

- Variable names must be lower case
- VAR?
- Functions
 - Fnc Type Name(){}
 - Void is a Type
 - Function names must be start with uppercase
- Classes
 - Names must start with uppercase
 - Constructor is a static function that returns Type
- Language Grammar
 - Terminal Nodes
 - Value
 - Identifier
 - Error
 - LineEnd
 - Object
 - Non-Terminal Nodes
 - NonAssignmentOperator
 - Function
 - OpenParen
 - CloseParen
 - AssignmentOperator
 - OpenCurly
 - CloseCurly
 - Production Rules
